Project 2 Team Contract

Team Name: Definitely Confused   Date: 3/1/18

GOALS: What are our team goals for this project? **What do we want to accomplish? What skills do we want to develop or refine?**
Understand stalling and forwarding in the context of a hardware description language. We want to implement pipelining in our current verilog processor and increase performance. Hopefully we'll all gain skills programming in verilog and a better understanding of the control modules needed to implement pipelining.
EXPECTATIONS: What do we expect of one another in regard to attendance at meetings, participation, frequency of communication, the quality of work, etc.?
Regular attendance - let team members know if you cannot attend a meeting Good communication - Update others on progress made and things to still do. Productive use of time - Each meeting has a purpose and a goal. Ask questions - If you are struggling with something or need clarification, ask for help! Update others when merging branches and keep Trello updated. Always git pull before pushing to the repository!
POLICIES & PROCEDURES: What rules can we agree on to help us meet our goals and expectations?
Be productive and stay on schedule. Communicate what you are working on with the team. Post to Trello to update the team on progress. Don't remove code before checking with the team; only comment out. Be responsible for your own work.
CONSEQUENCES: How will we address non-performance in regard to these goals, expectations, policies and procedures?
Talk to each other first and involve the professor in extreme cases.

We share these goals and expectations, and agree to these policies, procedures, and consequences.
